

FLOOR STANDARD LAMP COURRIER

Designer

CP — RV

Description

"Courier" was inspired by a simple straight line, imitating a beam of light which extends beyond the physical limits of an object. Its visual and physical lightness makes it possible to create a base with only a small diameter. The base is composed of two elements, a weight and a cover: the cover also conceals excess cable, which is coiled around the stem. Metal base in the form of a half-sphere Ø 16 cm; metal stem Ø 35 mm H = 173 cm, finished in ribbed Epoxy satin black lacquer RAL 9011. An LED module located in the conical section at the extremity of the stem, illuminates the ceiling. A directional reflector in translucent white PVC may be added to « dress » the stem, thus making it possible to diffuse and reflect the light by angling the reflector. Black PVC cable. Foot-operated switch. LED's are interchangeable (in factory). 14,6 W LED module, angle of diffusion 25°, emitting 1,628 Lumens or the equivalent of a 120 W incandescent bulb. Colour temperature 2700 K (warm white).
