

FLOOR STANDARD LAMP BAMBU

Designer

Alice Rosignoli

Dimensions

Height 1,780 mm | Diameter 200 mm | Weight 4.2 kg

Description

This lamp evokes a vase containing bamboo stems which are in reality 3 adjustable light rods made up of LED ribbon. The vase and the “bamboos” are in epoxy anthracite lacquered steel. The “bamboos” are mounted on a ball joint. They are therefore tiltable (within the limit of what the opening of the “vase” allows). It is also possible to rotate them 330° to be directed towards the wall to create indirect lighting. Each bamboo is equipped at its end with a 36 cm rigid LED strip with a power of 9 W releasing a light output of 1040 Lumens. Colour temperature 3000 K (warm white). A total of 27 W for 3120 Lumens. LED power supply 24V DC / 1250 mA - 30 W pluggable black colour, euro plug. Total consumption (LED module + power supply) = 30.7 W Black PVC cable. Black foot push switch/dimmer: Short press: ON (at maximum intensity). 2nd short press: decrease in intensity to a preset level of 50%. 3rd short press: further reduction in intensity to a preset level at 10%. 4th short press: OFF. The first continuous press increases the intensity. The second continuous press decreases the intensity.
